

## **Modern Careers – Engineered in Wood!**

The Wood Manufacturing Council and our industry supporters are available to make presentations in your school classrooms. If you would like to give your students an opportunity to learn more about the exciting career opportunities that are available in our sector, please contact us for more information.

### **Presentation Overview**

Forests are all around us in Canada, but how much do you really know about them? When did we first start to harvest the trees? How has this industry progressed and changed over time? We will explore how sustainable forest practices have led to more environmentally aware forest management. Wood is not the only value in the forest, what else do foresters deal with in their day-to-day activities? We will talk about forest values, and all the special components of Canada's natural resources.

Discover how technologically advanced the wood industry is today. We will show you how computers, modeling programs, and even robotic automation are helping advanced wood manufacturers to get more from the most renewable and environmentally friendly building material we have on this planet - wood.

This interactive and dynamic presentation will highlight the tremendous variety of careers in the Advanced Wood Manufacturing sector, and the educational opportunities available to young people across Canada. We will show your students how their class-work in Biology, Physics, Chemistry and Math relates directly to careers in the wood manufacturing sector.
